

## Harris Recognized as First Radio Manufacturer to Meet U.S. Department of Homeland Security's P25 CAP Standards

Boston, MA - Harris Corporation (NYSE:HRS), an international communications and information technology company, announced its P5400 800MHz Project 25 (P25) portable radio is **the first** to meet the demanding standards required by the Department of Homeland Security's P25 Compliance Assessment Program (CAP) compliance process.

Compliance with P25 standards is key to achieving much-needed interoperability among the nation's emergency response community.

The P25 CAP is a voluntary program managed in partnership with the National Institute of Standards and Technology's (NIST) Office of Law Enforcement Standards and a coalition of emergency responders and communications equipment manufacturers.

'In addition to meeting the standards, Harris has constructed a P25 compliance assessment lab in Lynchburg, Virginia, which is **certified** by the Department of Homeland Security and is actively testing equipment to P25 CAP standards,' said George Helm, vice president and general manager, Harris Public Safety and Professional Communications.
